ABSTRACT OF THE DISCLOSURE

1

A decorative shade for a video display with a screen has a window 2 with an opening to attach to the video display in front of the screen on the 3 video display, a rolling device mounted inside the window and a blind 4 wound on the rolling device to selectively cover the screen. Wherein, the 5 window can be mounted detachably on the video display or formed integrally 6 on the video display. The blind selectively winds onto or off the rolling 7 device to open or cover the screen. When the blind covers the screen, the decorative shade protects and keeps dust off the video display. Furthermore, 9 the window has a decorative appearance, and a picture on the blind imitates a 10 piece of artwork. Thereby, the video display is changed into an artistic 11 decoration. 12
